

ProFast8000

product sheet

Panels can be set up in a brick wall / offset pattern for greater joint strength

Overview

All SmartRink skating surfaces can be used for hockey, figure skating or recreation purposes. Although all the products are versatile there are applications to which they are better suited. If you are uncertain about which product to use please contact your nearest SmartRink representative. ProFast8000 uses Very High Molecular Weight PE, sinter pressed and then machined to exacting standards. Slip additives are included with the raw material to improve speed, providing very a high performance (VHP) panel which is the fastest product on the market today. All ProFast products by SmartRink are treated for UV and can be used outdoors.

Lines & Markings:

Goalie crease, blue line, red line, goal line available on request
