

Product Sheet

PROFAST 8000

Panels

Overview

All IcePro skating surfaces can be used for hockey, recreation or figure skating purposes. Although all the products are versatile there are applications to which they are better suited. If you are uncertain about which product to use please contact your nearest IcePro representative. ProFast8000 uses Very High Molecular Weight PE sinter pressed and then machined to exacting standards. Slip additives are added to the raw material to improve speed and provide the fastest product on the market today. All ProFast products by IcePro are treated for UV and can be used outdoors.

Specifications:

Dimensions:	1020mm x 1020mm x 8mm
